Deep Learning for Image Analysis
Course Introduction

E. Decencière, Thomas Walter, Santiago Velasco-Forero

MINES ParisTech
PSL Research University

About the lecturers

Thomas Walter

http://members.cbio.mines-paristech.fr/~twalter

- Research: bioimage informatics
- Main application fields: High Content Screening (HCS), as a method to systematically study biological processes by analyzing cellular phenotypes

Santiago Velasco-Forero

http://cmm.mines-paristech.fr/~velasco

- Research: image processing, pattern recognition, multivariate statistics, graph-based data/image analysis
- Main application fields: Remote Sensing, cosmetology, astronomy, hyperspectral imaging.

Etienne Decencière

http://cmm.mines-paristech.fr/~decenciere

- Research: mathematical morphology and image analysis
- Main application fields: Ophthalmology, dermatology, cosmetology, astronomy

Objective and pre-requisites

Objective

Introduction to the theory and practice of deep learning for image analysis.

Pre-requisites

- Basic calculus and probabilities
- Programming: Python

Language

- Slides: English
- Oral: English or French, according to auditory

Contents

Pedagogic approach

- 8×3 hours:
  - 6 lessons
  - 2 sessions of practical work with Jupyter notebooks (python, keras) on Google Colab

Themes

- From image classification to image transformation
- Introspection
- Supervision reduction
- Autoencoders and Generative Adversarial Networks
- Metric learning

Evaluation

Practical work and exam
